

GRAIN  SAFE[®]

two small words one big deal

Freecall: 1800 808 769

BACKGROUND

Ellis & Sons Group, the parent company of GrainSafe® is becoming synonymous with innovation specific to one of the world's most precious and fundamental commodities – grain.

Our dedication to innovation stems from our commitment to our customers – meeting their need and exceeding their expectations.

We have invested extensively in research and development and work together closely and effectively with our customers to embrace new ideas.

The result of our commitment to innovation is GrainSafe® (patent pending) - a superior product unlike anything on the market today.

GrainSafe® storage products are designed to optimise grain storage through user-friendly and time-efficient improvements, making the operators job safer, simpler and more effective.

BENEFITS

Safety

- Helping to keep people off the bunker thereby reducing 'Duty of Care' issues relating to working with a bunker cover.
- Restraining and controlling the cover in windy conditions, reducing accidents.

Saving Grain

- Reducing moisture ingress. The zips eliminate the need to cut the cover. The straps reduce leakage from windflap damage.

Saving Covers

- The Grainsafe® Restraint strap reduces wind-flap wear and tear to the covers. The Access Point reduces the need to cut & damage the cover.

Saving Labour

- No need to repetitively cut and patch, or lift side boards for access.

Increasing Output

- Keep in loading and out loading in windy conditions.

AWKWARD & TIME CONSUMING TO ACCESS GRAIN - UNTIL NOW

Traditionally to access the grain below a bunker cover, the cover is cut open, the procedure performed, the cover is hand sewn and sealed with either paint or tape. Alternatively the side boards of the bunker are removed, the grain accessed, then the bunker is re-sealed.

EFFICIENT & EFFORTLESS GRAIN ACCESS

With GrainSafe® Access Points (patent pending) the operator simply opens the waterproof, gas-tight zipper, makes a small slit in the cover, accessing the grain and then simply closing by re-zipping shut. Simple. Efficient. Uncomplicated.

DANGEROUS WHEN UNSECURED

When adding or removing the grain from a stock-pile, conventional tarpaulins are partially released from their side wall clamps and folded back. Operators are at risk of getting hurt if the cover is blown up by the wind. This is a potentially dangerous situation as the unsecured cover can act like a sail.

SAFE & SECURE

The GrainSafe® Restraint System (patent pending) assures workman safety through employing the use of restraint webbing and ratchets attached to the cover. When the dump is opened both the flap and the cover can be secured down promising safety to you and your workmen. It also provides additional benefits of keeping the cover better secured on the dump preventing flex and flap wear and increasing the life-span of the cover.

TESTIMONIALS

“ We have used the GrainSafe system from Tail-Wind Tarps since it was first released and have found it to be an exceptional product.

Grain storage in bunkers is all about keeping the moisture out. If you don't have to cut the tarp you are 90% towards getting the job done. The resealable GrainSafe access point does just that & additionally makes the operator's job much quicker and easier. No moisture saves grain and that is money in your pocket.

We found the GrainSafe strap system very beneficial in the same way – it keeps the cover securely in place and sealed and keeps the moisture out. And of course, the safety aspect of keeping workmen off the cover is the most important consideration of all.”

Peter Parslow
General Manager - Agrigrain
Narromine NSW

“ Ardlethan is a windy site, and we found that the bunker covers with the GrainSafe straps don't move. It saves a lot of hassle with securing the tarps down. We have used the GrainSafe system for one year and we envisage that it will substantially reduce our ongoing tarping costs in the future due to increased efficiencies & increased lifespan of our tarps.

The access points with the waterproof zipper sound like a good improvement to the system.

I'll be getting the GrainSafe system on my tarps next year.”

Bill Preston

Ardlethan NSW

“ Cowra Freight has been using Tail-Wind Tarps for over 15 years. We have consistently received excellent service (second to none) and the highest quality finished products that exceeds our expectations. Being a transport company, we have narrow time slots, and they have bent over backwards to accommodate these requirements. We are proud to be associated with Tail-Wind Tarps and look forward to continuing together in business.”

Philip Beer
Director - Cowra Freight

The Grainsafe® System

- ✓ Save Grain
- ✓ Save Money
- ✓ Save Time
- ✓ Save Lives
